## Optimize Fungicide and Insecticide Applications

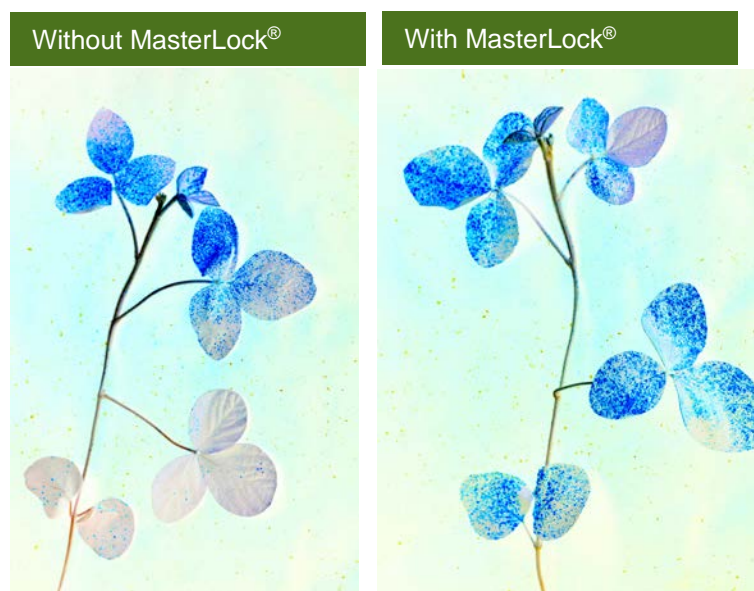

MasterLock® adjuvant combines InterLock® and DropTight™ additive technology in one crop-based adjuvant to enhance spray coverage. MasterLock® adjuvant works effectively with fungicides and insecticides and may be used with herbicides and other crop protection products.

### FEATURES AND BENEFITS

- Improves spray deposition
- Improves canopy penetration
- Reduces spray drift and evaporation of pesticides
- Enhances spray droplet sticking and spreading for more coverage
- NPE free, therefore should not contribute to arrested ear

### Improved Coverage

MasterLock® adjuvant helps optimize droplet adhesion, which reduces bounce and increases droplet spreading for improved contact and coverage. It also helps to get the droplets down in the canopy. The combination of increased adhesion, reduction in bounce and increased canopy penetration leads to more fungicide and insecticide where it is needed the most.

Example of improved droplet adhesion and canopy penetration on soybean with and without InterLock® technology in MasterLock® adjuvant

Deposition, Canopy Penetration, Drift-  
Reduction, Spreader-Sticker

#### USE RATE†

Ground: 6.4 fluid ounces per acre

Aerial: 1 gallon per 100 gallons (but not <4 fluid ounces per acre)

#### ACTIVE INGREDIENTS†

100%: Modified vegetable oil, polyoxyethylene sorbitan fatty acid ester, vegetable oil and soybean oil, ethoxylated

#### PACKAGING

2 x 2.5 gallon jugs  
275 gallon mini bulk

† Always read and follow product labels directions.
